

Repartee® UC

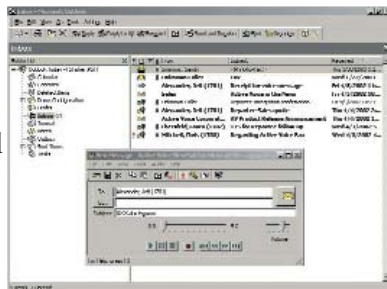

for Windows® 2000

Unifying Your Communications World

Imagine having instant access to every e-mail, voice and fax message that you receive no matter where you are. Now, imagine being able to manage and respond to those messages using simple voice commands over the telephone or by using a mouse at your PC. Imagine being able to print a Microsoft® Windows® document directly to a fax machine or handle live incoming calls from your PC without even picking up the telephone. Imagine a world in which you never miss another opportunity because you have the ability to respond quickly to your customer's requests. That's the power of a Repartee® UC (Unified Communications) for Windows 2000 system.

The Freedom of a Single Mailbox

The Repartee UC solution offers you advanced unified messaging, voice mail and automated attendant functionality, helping your organization become more responsive than ever. Through its optional suite of unified messaging and desktop call management applications, Repartee UC provides you with the most complete unified communications solution available.

The unified communications applications integrate Repartee UC with your LAN to give you control over live telephone traffic and messages – voice, fax and e-mail – all from your desktop PC. The ViewMail® for Microsoft Messaging module, for example, works with Microsoft Exchange® to allow you to access your messages from one familiar inbox. In addition, the ViewCall® Plus module lets you handle live telephone traffic from your PC and also works with the applications you use every day such as your Outlook® contact list and your Access® database.

New Features in Version 2.2

Repartee UC builds on its proven technology with many new features including:

Speech Recognition using Nuance® 8.0. By speaking simple commands into any telephone, you can navigate your mailbox and change your personal options with Repartee UC's powerful Speech Recognition package. The most important advantage of using speech technology is that it's easy to use. Instead of struggling for the DTMF buttons on your mobile phone or memorizing a set of codes to play a message, you can use simple and intuitive speech commands to interact with the Repartee UC system.

Text-to-Speech using ScanSoft® RealSpeak™. With Repartee UC's Text-to-Speech package, you can have 24-hour, two-way access to your Microsoft Exchange or Lotus® Notes® e-mail messages without a laptop or modem connection. You can handle email over the telephone just like voice mail. You can listen to any e-mail message using text-to-speech conversion, and then record a reply, which is sent either as a voice mail message or as an e-mail with a WAV file attachment.

ViewMail for Lotus Notes. The new ViewMail for Lotus Notes module gives you the flexibility to send and receive different types of messages interchangeably from one universal mailbox. All of your messages—voice, fax, and e-mail—appear in your Lotus Notes e-mail inbox. Prioritizing is easy. It only takes a quick glance to see what types of messages have appeared. Just like an e-mail message, you can select which voice messages you want to listen to first. Reply, redirect or archive your voice messages for later reference.

Repartee UC for Windows 2000 at a Glance

- | | |
|---|-------------------------------------|
| • Speech-Enabled Unified Communications | • Transaction Boxes: Unlimited |
| • Ports: 4 – 96 | • Subscribers: Unlimited |

FEATURES & BENEFITS

| | |
|--|--|
| Single Unified Inbox | Access and manage all message types (voice, fax and e-mail) from a single unified Microsoft Exchange or Lotus Notes inbox. |
| Natural Speech Interface to Mailbox | Navigate the inbox and change personal settings via the telephone using natural speech. |
| Text-to-Speech Functionality | Just like a voice message, listen and respond to any Microsoft Exchange or Lotus Notes e-mail message via the telephone. |
| Live Incoming Call Control via Desktop PC | Handle several callers at once without interrupting conversations. Take calls, send calls to a voice mailbox, transfer calls to other extensions, ask callers to hold, or hear a caller's screened name with the click of a mouse. |
| Fax Store and Forward | Receive incoming faxes into your personal fax mailbox. Using the telephone user interface, you can quickly and easily deliver the fax to any fax machine or save it for future transmission. |
| Desktop Fax Viewer | Increase security and privacy by receiving and viewing faxes on your desktop PC instead of a fax machine. |
| Print Directly to a Fax Machine | Send a Windows document to any fax machine without ever leaving your desk. |
| Mailbox Manager | Modify greetings, security codes, notification, groups, conversation preferences, and much more via a graphical user interface on the desktop. |
| Multiple Language Support | Choose from 17 different languages to suit the multilingual requirements of your customers and employees. |
| Robust PBX Integration Support | Connect via analog, serial or digital integration with over 150 major PBXs, including Avaya, Nortel and Mitel. |
| Intuitive Windows-based Administration Console | Administer Repartee UC from any Windows PC on your LAN. |

Optional Packages

- Speech Recognition
- Text-to-Speech for Microsoft Exchange or Lotus Notes
- ViewMail for Microsoft Messaging
- ViewMail for Lotus Notes
- ViewCall® Plus
- ActiveFax®
- ViewFax® with Print-to-Fax
- Multilingual Prompt Sets
