Digitel Systems Helps Businesses Deploy and Harness the Power of Gigabit Networks

Leading Unified Communications Provider Shares Huge Development in Tech

Vancouver, British Columbia – October 25, 2016 - Digitel Systems a leader in unified communications, announced today that the company is helping small to mid-sized business (SMB) owners deploy and harness the power of Gigabit Networks. Digitel Systems will educate business owners on how this technology can bolster company-wide productivity, reduce capital investments in IT infrastructure and equip employees with one of the most central assets they need to work effectively – speed.

Each and every day, more and more businesses migrate to the cloud and they rely more heavily on the cloud than ever before. Gigabit Networks will undoubtedly play a central role in facilitating this transition. Gigabit Networks create faster performance across the board, enabling businesses to run their organizations from the cloud, while simultaneously accessing all of their applications, software, virtual private networks (VPN) and other data seamlessly.

Gigabit Networks are networks that perform at 1000 Mbps (Megabits-Per-Second) and are set to become the new standard for connectivity. In simple terms, Gigabit Networks increase a business' ability to access important files, data, applications or services which require high-bandwidth

connectivity, like streaming to devices without interference or latency. This means that if a company stores their files in the cloud, there's no more waiting around for the bandwidth to stop lagging. For businesses using videoconferencing solutions, this means no more fuzzy, pixelated pictures and repeatedly dropped calls. This development means an improvement to virtually every single device on the network, for a minimal expenditure. This has opened up the floodgates for businesses to run their entire operation from the cloud because they can put everything on the cloud, virtualizing their entire IT infrastructure.

"Everyone sees massive value in taking their organization to the cloud," stated Jerry McKenzie, President at Digitel Systems. "Those who could foresee this eventuality, were the early players to enter the managed IT services marketplace. At Digitel Systems, our clients love the enhanced security of the cloud, they love the easy access to applications on any device and the ability to bring their own device to the network. However, the one issue that organizations used to run into when they would attempt to transition to the cloud was that network speeds couldn't handle the demands of the business. Gigabit Networks have ended this problem. They are so fast, have such strong connectivity and

fuel the high-performance of virtually everything else. Moving to gigabit is like going from horse-drawn carriages to Formula One cars. Your competition will need more than luck to keep up."

About Digitel Systems Inc.

Founded in 1984, Digitel Systems is a leader in voice communications in British Columbia. The company's mission is to increase its customers' profitability, improve their productivity and give them a competitive advantage by implementing the right technology. Digitel Systems is the only provider that protects its customers from the two risks of technology – obsolescence and cost. Digitel Systems has earned the position as the market leader and it customers' business through quality products and services.

As a premier member of Technology Assurance Group, Digitel Systems is the ultimate resource for business phones systems, using voice over internet protocol (VOIP), session initiation protocol (SIP) and audio/web conferencing. Digitel also provides comprehensive disaster planning and recovery for local and wide area voice networks.

Digitel Systems delivers future technology today! For more information please call 604-231-0101 or visit www.digitel.ca.
