## **Digitel Systems Launches Secure WiFi-as-a-Service to Protect Customers from Cyber Attacks**

*Leading Managed Technology Services  
Provider (MTSP) Leverages Innovative  
Wireless Access Points to Secure  
Connections to the Internet*

VANCOUVER, BRITISH COLUMBIA – February 2020 - Digitel Systems, a leading managed technology services provider (MTSP), announced today that the company has launched a Secure WiFi-as-a-Service program to protect its customers from cyber attacks through wireless access points. Over the past few years, the prevalence of cyber attacks has continued to grow, expanding every SMBs' need for cybersecurity. One of the most widely utilized methods by cybercriminals is WiFi hacking through an organization's wireless access points.

WiFi hacking has proven to be one of the most effective means of cyberattacks and hackers are using this specific method to exploit SMBs. However, Digitel Systems' Secure WiFi-as-a-Service program comprehensively stamps out this threat and equips SMBs with a means to securely connect to WiFi, so that their businesses can run smoothly, securely and safely. This program goes far beyond the typical protection that most businesses utilize. Common cybersecurity packages include firewall, data backup, antivirus, malware prevention, OS security and patches, yet these solutions are no longer sufficient protection mechanisms.

In the modern workplace, everything relies on the Internet and

a secure connection is now an absolute must for any organization. Unfortunately, the majority of all breaches happen to SMBs and the main reason is that their IT provider is not providing sufficient protection against cyber attacks. SMBs require a secure connection in order to ensure that their employees, networks and customers are protected from infiltration, data extraction and credential theft. WiFi hacking is often overlooked as a security threat; however, as Internet speeds have dramatically increased in performance in recent years, so have the associated risks. WiFi hacking has become prevalent because it's very easy to hack wireless access points.

Fortunately, Digitel Systems offers customers a Secure WiFi-as-a-Service program on a month-to-month basis with no capital expenditure. Digitel Systems provides its customers with state-of-the-art wireless access points designed to thwart cyber attacks. This unique technology includes a powerful wireless intrusion prevention security system, real-time business driven and location-based analytics, and social-enabled captive portals. The Secure WiFi-as-a-Service program includes technology refresh, so the wireless access point is always up to date with the latest software and cybersecurity technology.

"The reason that businesses need to secure their WiFi is because these attacks can go undetected for a very long time, which poses serious risks

to any company," stated Jerry McKenzie, President of Digitel Systems. "Hackers are only getting smarter and the sooner a business can lock down every entry point into their network the better."

### **ABOUT DIGITEL SYSTEMS INC.**

Founded in 1984, Digitel Systems is a leader in voice communications in British Columbia. The company's mission is to increase its customers' profitability, improve their productivity and give them a competitive advantage by implementing the right technology. Digitel Systems is the only provider that protects its customers from the two risks of technology – obsolescence and cost. Digitel Systems has earned the position as the market leader and its customers' business through quality products and services.

As a premier member of Technology Assurance Group, Digitel Systems is the ultimate resource for business phones systems, using voice over internet protocol (VOIP), session initiation protocol (SIP) and audio/web conferencing. Digitel also provides comprehensive disaster planning and recovery for local and wide area voice networks.

Digitel Systems delivers future technology today! For more information please call 604-231-0101 or visit [www.digitel.ca](http://www.digitel.ca).
